Subject: Mandaree Salt Water Brine Spill

FYI! On sept 23, 2014 my water samples were pulled from the bay where the July 2014 mandaree salt water brine spill occurred. The shoe prints were along the shore line. Crestwood/arrow pipeline workers are working above the hill of bay where spill occurred. Pictures taken and reported to environmental justice. Who did this apparently don't want the truth out on the environmental impact from this brine spill.

A past few weeks we collected sample no one cleaning the this mandaree salt water brine spill. Cows eating contaminated grass. Than the 3rd week we videod crestwood/arrow fenced off spill site.

Reminder: a few weeks ago Fbcc science professor conducted own sample from the beaver dam below the mandaree salt water brine spill and found it 25 percent salt water. Also this salt water brine is 10 times saltier than ocean water so it's like cancer, kills slowly.

More water samples will be conducted!
